Maxillary Arch Regenerative Strategies 2020: Single Tooth to Full Arch Reconstruction. 4 hour CE Lecture

This clinical based presentation will cover current hard and soft tissue grafting protocols for single tooth to full arch reconstruction. The use of 3D digital planning and diagnostic protocols will be featured along with comprehensive case presentations. Also covered will be future technologies for implant based surgical reconstruction.

Objectives:

- Understand the importance of 3D Diagnostics for implant based reconstruction
- Understand the role of recombinant proteins and other bioactive modifiers for hard and soft tissue grafting
- Understand the synergy of hard and soft tissue grafting for alveolar ridge reconstruction
- Understand a unique fully guided protocol for immediate fixed full arch reconstruction

Dr. Chris R. Richardson - Graduate of UAB, completed his Periodontal training at UTHSCSA and has practiced in Richmond, VA for more than 22 years. Board Certified Periodontist by the ABP. Served as President of the Richmond DS, SAP and on the Board of Directors of the AAP. Currently Vice-President of the AAP. Dr. Richardson is active with the IJPRD, AAP, AO, ADA and the VDA. He has won several distinguished awards. *A complete biography and course description is located here: www.periosouth.net.*

Course Description:

2 Hour CE Lecture

This presentation will focus on three different topics that I would like to present in quick, 40-minute sessions. The three sessions will include 1) Extraction and Immediate Dental Implant Placement, 2) Tooth Autotransplantation, and 3) Private Practice Based Clinical Research. Immediate implant placement is a skillset that the periodontal surgeon must have in their repertoire. Managing traumatic fractures to teeth in the anterior esthetic zone is a practice builder and can make you the "Go-To Periodontist" in your area. Tooth autotransplantation is an incredible service to provide to our younger patients that can aid in transitioning to implant care or provide a natural tooth for life. Finally, if you have ever considered conducting clinical research trials in your office, I will provide background and the results of the research completed in our office as well as give guidance on how to get involved.

Dr. John Russo - Graduate of Ohio State, completed his Periodontal training at MUSC and has been in practice in Sarasota since 1993. Served as President of the SAP and is currently representing District 3 on the AAP Board of Trustees. Lecturing on bone and soft tissue grafting and implant surgery for 18 years. *A complete biography and course description is located here: www.periosouth.net.*

Course Description:

2 Hour CE Lecture

This lecture will explore the role that this breakthrough technology plays in the dental implant practice. Learn about dynamically guided surgery workflow: everything from digital planning, including CBCT DICOM data, STL files, and implant treatment planning all the way through to the navigated surgery and prosthesis. There will be a review of current literature comparing free-hand implant placement and static guides with dynamic guided implant placement. Several examples will be shown of cases treated with dynamic guided implant placement.
